

Everlong

Spring Wheat

WHY CHOOSE EVERLONG

- Highest Yielding
- Highest Specific Weight
- Suitable as an Alternative Wheat
- Excellent Disease Profile
- Early to Mature

EVERLONG, a group 4 Spring Wheat, bred by Austrian breeder Saatzuut Edelhoff, is new to the current 2024/2025 AHDB Recommended List. Edelhoff, the breeder, is well known across the continent for their work in breeding both conventional and organic varieties.

EVERLONG offers the highest yields & highest specific weight of any variety on the Recommended List and most importantly offers a wide drilling window from November through to April, which over recent wet seasons is invaluable for farms needing flexibility in sowing due to climate change & broadening rotations.

YIELD & QUALITY

AHDB Recommended List 2024/2025: Treated yields & Specific Weight

UNTREATED YIELD - Agrii Private Trials (Harvest 2024)

	YIELD (%)	SPECIFIC WEIGHT (KG/HL)
EVERLONG	101.7	76.1
KWS Ladum	94.2	71.1

DISEASE RESISTANCE - AHDB Recommended List 2024/2025

Variety	Mildew (1-9)	Yellow Rust (1-9)	Brown Rust (1-9)	Septoria Tritici (1-9)	Height (cm)
EVERLONG	8	7	7	6	79
Cochise	8	4	8	6	77
KWS Alicium	8	7	6	7	84
WPB Mylo	8	9	8	7	74
Escape	8	8	5	6	72

Everlong has Lennox in its parentage, a variety well known for its ability to be planted in the Alternative Wheat Slot. Everlong Breeder, Elizabeth Zechner (Saatzuucht Edelhoff) is confident in Everlong's ability to perform in the Alternative Wheat Slot:

“We have drilled Everlong as a winter wheat at Edelhoff breeding station (600m above sea level) within the last 3 years against alternative variety Lennox without any troubles caused by harsh Austrian winters”.

ALTERNATIVE WHEAT TRIALS: Agrii Alternative Wheat Trial, Lincs

VARIETY	HEIGHT	YIELD (%)	SPECIFIC WEIGHT (KG/HL)
EVERLONG	86	105.6	75.9
KWS <u>Fixum</u>	93	102.9	78.2
Skyfall	83	96.3	76.8
KWS <u>Alicium</u>	95	96.3	79.2
KWS <u>Ladum</u>	89	94.5	76.8

FARMER TESTIMONIAL

“Everlong went well into to heavy clay soils that had been flooded but started to clear. It felt very late to plant, but seed bounced out of the ground and was away quickly.” Colin harvested Everlong on 21 September, and it was the last crop to go through the combine. It yielded 5t/ha. “It was a high-quality crop with high specific weight of 80kg/hl, and a protein level of 13.9% which is unheard of for a group 4 with only 150 kilos of nitrogen. Everlong performed well, and it was easy to grow. If we keep getting this unseasonal weather, alternative spring wheats will be in demand. It’s a strong back-up option,”

**Colin Chappell,
Chappell Farms
Lincolnshire**

	PROTEIN	SPECIFIC WEIGHT (KG/HL)	DRILLING DATE	TOTAL NITROGEN APPLIED	YIELD
2024	13.9	77.4	28/04/2024	150 Kilos	5 t/ha
